The Reprogrammable SIM Card

19.03.2020

AVNET[®]
Reach Further[™]

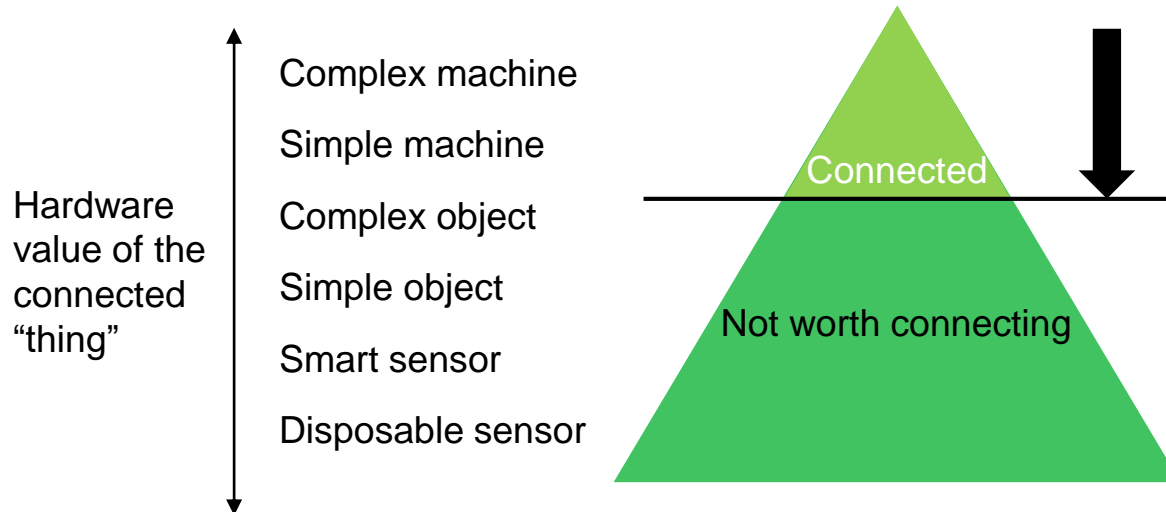

The IoT is our 2nd Telecom Revolution

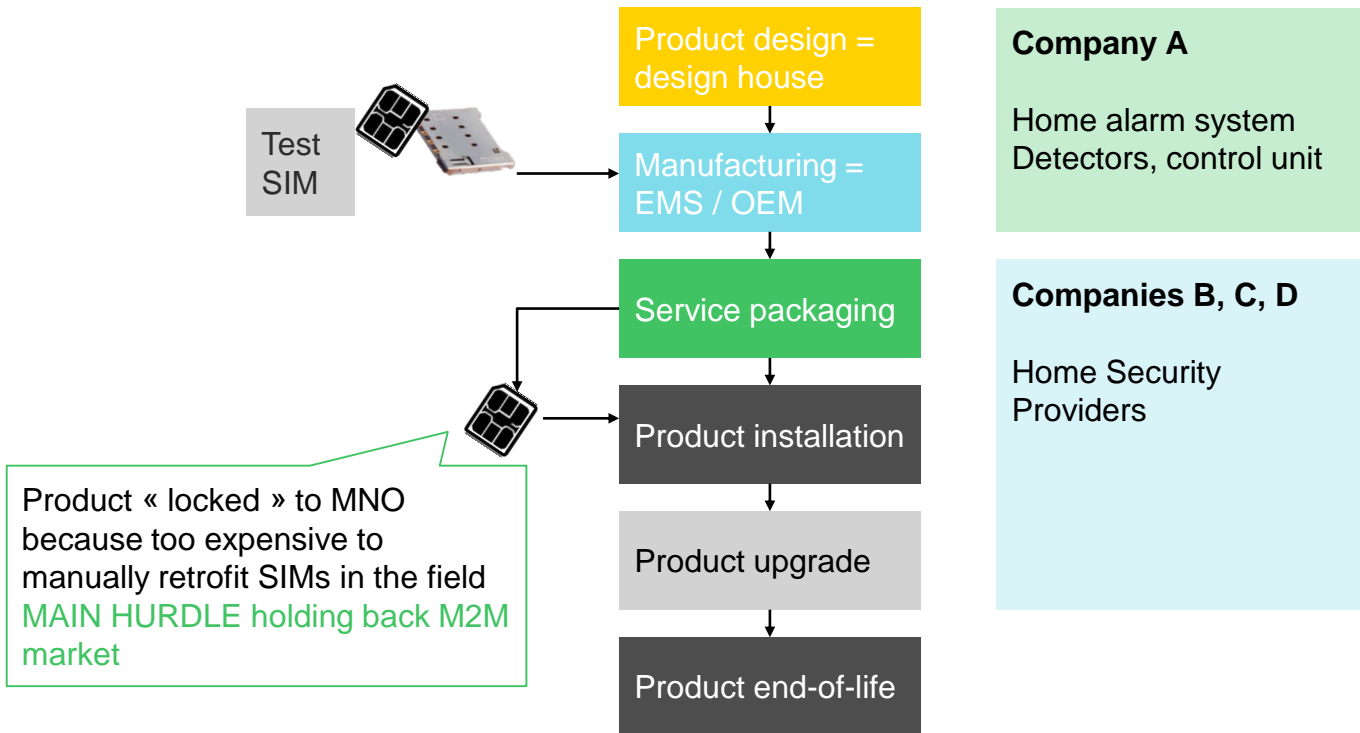

- Connecting people was once luxury, a privilege reserved to the rich
- Connecting people is now a mature business reaching saturation

- Connecting "things" was once luxury reserved to high-end machines
- Expanding the market of connected "things" is simply pushing down the cost boundary

Legacy SIM – Poor flexibility holding back M2M/IoT market

Opportunity

Problem	eUICC solution
Each cellular connected IoT device requires a SIM card	eUICCs behave like SIMs in IoT devices
Manufacturing with many carriers requires as many production SKUs	Manufacturing with 1 SKU and differentiating products later over-the-air in the field
Field deployed devices require physical SIM card change to change carrier	Changing carrier can be performed over-the-air as a service
It is cost prohibitive to change SIMs on deployed devices which remained locked to the same carrier forever	Customers can frequently bid data plans among carriers over not only leveraging news products but also already deployed devices

eUICC –

The reprogrammable

2G/3G/4G/Cat-M1 SIM

SIM vs « MNO eUICC » vs real eUICC

	SIM card	MNO eUICC	Avnet eUICC
Delivered with operator profile	✓	✓	✓
Pre-paid data allowance for factory test	Optional	Optional	✓
OTA carrier provisioning	X	✓	✓
OTA swap of MNO profile	X	✓	✓
Customer controls which profile is inside the SIM/eUICC	✓	X	✓
Customer can change data plan invoicing partner	X	X	✓
No fees, no engagement	X	X	✓
On-demand applet portfolio	X	X	✓

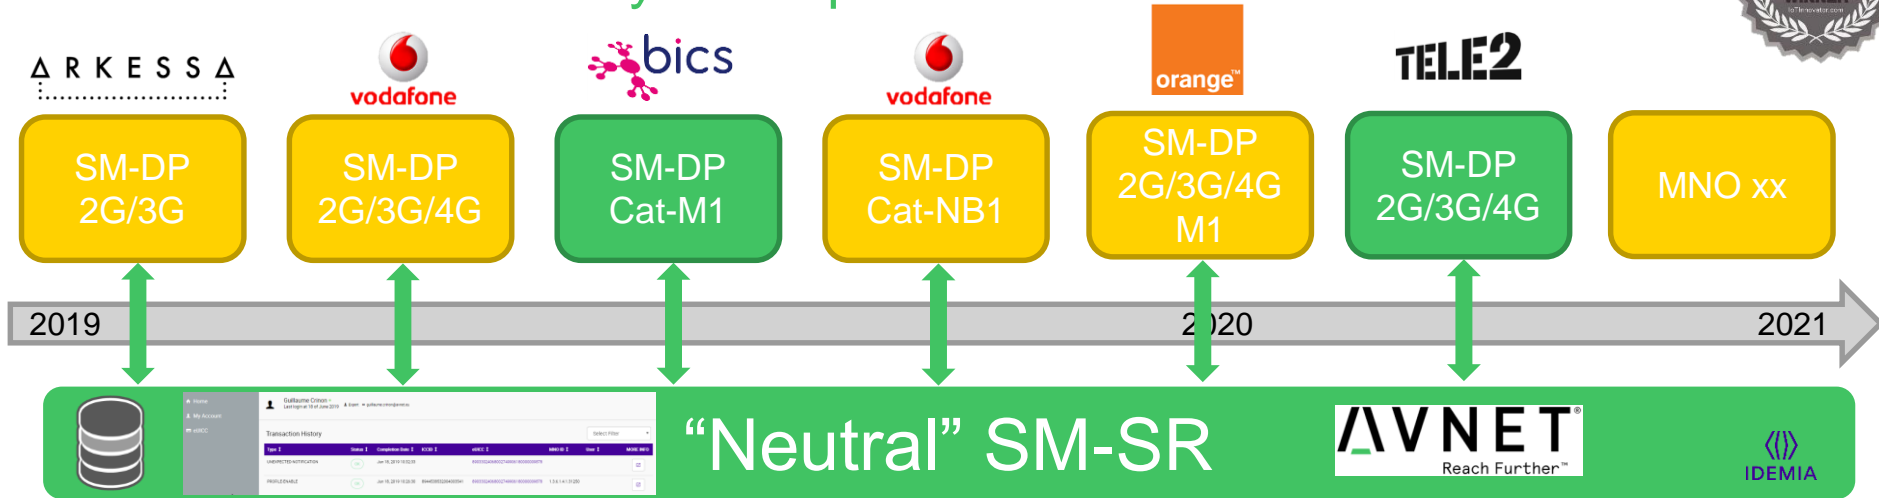

The eUICC concept

- eUICC = embedded Universal Integrated Circuit Card
- A SIM card with flash memory instead of ROM allowing to change the operator (MNO or VNO) profile with a remote management platform
 - Up to 3 MNO/VNO profiles simultaneously
- Can be packaged in:
 - 2FF (plastic)
 - MFF2=DFN6 (chip)
- A management platform able to operate services such as operator switches

Avnet eUICC management system as 1 global hub allowing any OEM to download any MNO profile

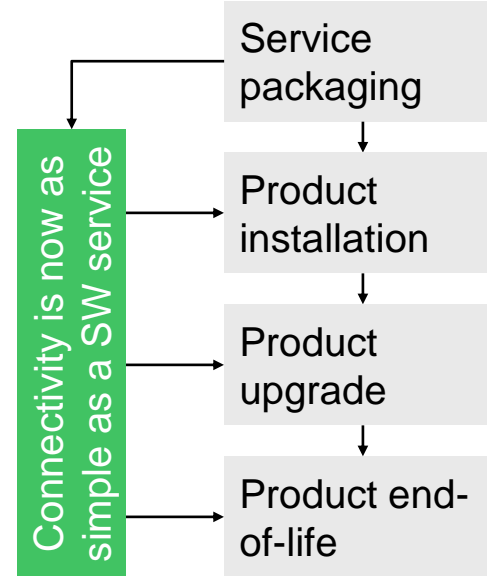

Simple pay-per-use business-model
 No yearly subscription, no engagement, no hidden costs

eUICC benefit #1: Connectivity as a Service

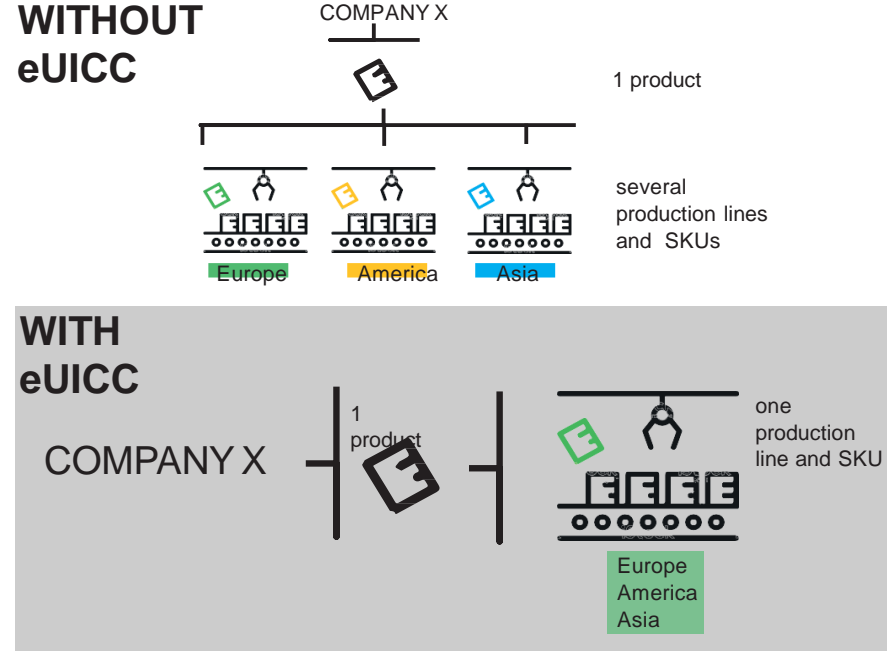

- Along the product life, whoever manages it can renegotiate his connectivity contract every 1/2/3 years and change operator for cost optimization **without manual SIM retrofitting in the field**
 - This is an important cost saver
 - This is a new service by Avnet
- We call the solution “future-proof” and believe it will grow the overall market for modems and 2G/3G/4G/Cat-M1 connectivity
- **We are not an MNO: our customers can have a direct relationship to their preferred MNO for data plans and operations**

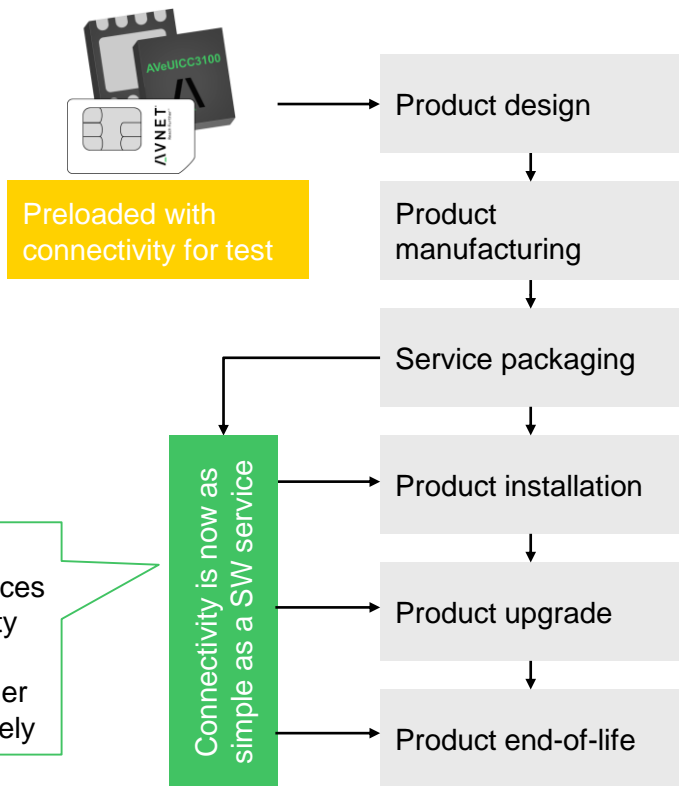

eUICC benefit #2: Late Product Personalization

- Decouple connectivity from the physical SIM card component
- When our OEM customer produces for several customers/geographies, the production needs to be manually differentiated in the factory with the SIM cards corresponding to the final destination
- The eUICC solves this: the physical component is implemented at product design/manufacturing and the service packager upgrades the operator later in the field “as a service”
- This is an important cost saver and a service our OEM customers can resell themselves
- **We are not an MNO: our customers can have a direct relationship to their preferred MNO for data plans and operations**

eUICC – Full flexibility in product life-cycle unlocking market

Leverage fleets of already deployed devices to optimize connectivity costs
Load and reload partner carriers profiles remotely

Company A
Home alarm system
Detectors, control unit

Companies B, C, D
Home Security Providers

eUICC for which networks

Low-Power
Wide Area Ntw
LPWAN

The NB-IoT (cat-NB1) standard does not support eUICC admin services yet. But we are working on solving the problem for Q2 2020

Qualified 3G modem

QUECTEL UG96

Qualified 4G modems

QUECTEL EC25 & EC21

QUECTEL EG91

QUECTEL EG95

Qualified LPWAN modem

QUECTEL BG96

How is the product packaged? AVeUICC3100xxx product line

- An AVNET/IDEMIA eUICC chip
 - 2FF: Plastic format
 - MFF2: Chip format
 - MOQ: Boxes of 50 & 500, reels of 3K (MFF2 only)

+

+

- Pre-installed profile (bootstrap) of partner carrier
- Pre-paid communication with this production carrier
 - To be used for the production factory test
- **First carrier change offered if first user does not want to use bootstrap carrier**
- **Unlimited provisioning of the eUICC on AVNET's SMSR for administration purposes**

AVeUICC3100ARK – Available for sale!!

- An AVNET/IDEMIA eUICC chip

+

- 700kB of pre-paid communication worldwide
 - To be used for the production factory test
 - Valid for 3 months after activation
 - Unlimited provisioning of the eUICC on AVNET's SMSR for administration purposes
 - Optional services down the road:
 - ARKESSA profile used as a bootstrap: backup, services
 - Operator change campaigns
 - Download of applets*
- (*)Avnet is the entry point for service operations throughout product life even if the product changes ownership from our direct customer to another entity

+

Δ R K E S S Δ

AVeUICC3100VOD – Available for sale!!

- An AVNET/IDEMIA eUICC chip

+

- 100kB of pre-paid communication Europe + Asia
 - To be used for the production factory test
 - Valid for 3 months after activation

+

- Unlimited provisioning of the eUICC on AVNET's SMSR for administration purposes

- Optional services down the road:
 - Operator change campaigns
 - Download of applets*

(*) Avnet is the entry point for service operations throughout product life even if the product changes ownership from our direct customer to another entity

AVeUICC3200BICS – Available in Q2 2020

Global Cat-M (LTE-M) + 2G + 3G + 4G

– An AVNET/IDEMIA eUICC + low-power applet

+

- 100kB of pre-paid communication worldwide
 - To be used for the production factory test
 - Valid for 3 months after activation

+

– Unlimited provisioning of the eUICC on AVNET's SMSR for administration purposes

- Optional services down the road:
 - Operator change campaigns
 - Download of applets*

(*) Avnet is the entry point for service operations throughout product life even if the product changes ownership from our direct customer to another entity

Avnet eUICC test pack – Available for sale !!

- 6 eUICC – 4x 2FF + 2x MFF2 each preloaded with the following:
 - 1 Vodafone test profile + 1 Arkessa test profile
 - 2x50 MB of pre-paid Vodafone & Arkessa data communication in Europe valid for 3 months after activation
- Vodafone & Arkessa test accounts for managing the Vodafone & Arkessa pre-paid connectivity: Profile activation, data usage, etc.
- On-demand eUICC administration services from Avnet: Profile download, swap between Vodafone and Arkessa, fallback mgmt, etc.

Operator roadmap

- We are in active negotiation with other operators to have them join the program:
 - Orange
 - Tata Comms
 - Tele2
 - 3HK
 - Telus
 - And this will be a continued process
- The idea is to have soon a broad offering of MNO/VNO able to answer market demands per geography and vertical in addition to ARKESSA and VODAFONE

Avnet eUICC program recognized by the IoT Innovator 2018

- Avnet eUICC has been named a Silver Winner in the Best IoT Network Solution – Commercial & Industrial for the '2018 IoT Innovator Awards' program

Thank you!
