

Water Purifier

Overview

Health has always been an important pillar of society. Our heightened health awareness also makes us more willing to spend on related causes - from fitness center fees and health talks to organic food and water quality. In both commercial or household settings, water purifiers are a key equipment which filter out bacteria and odors from our daily drinking water. The operational life of filters depends on both the rate of water consumption and source quality. In line with this, Avnet has developed a smart monitoring system which keeps track of water filter operations and highlights required changes to the user/supplier once it reaches a pre-set limit.

Features

- Chlorine Taste & Odor, VOC, Lead, Atrazine, Lindane, Chloroform, Cysts and other substance reductions
- Provides safer, more delicious water for drinking
- Effortless click-in cartridge exchange
- Smart monitoring system to raise alerts about water filter life

Target Applications

- Smart monitoring
- Food & beverage
- Predictive maintenance
